

How to use the image labeler GUI

1

Click the button **Select Folder** and select the master folder 'Lung Transplant' where all the videos are saved.

2

Click the button **Select Text File** and select the text file that contains all relevant frames from the videos.

3

Start labelling the images on the screen with True, False or Unusable.

4

When all images are labelled, click **export as CSV**. This will save an excel file with all the labelled data to your current working folder in Matlab.

Important! Follow these steps in the right order to avoid corruption of the output files!
